

PNR

**SOLUTIONS FOR
THE PULP AND
PAPER INDUSTRY**

STOCK PREPARATION

Here we present our nozzles and washing heads that can be used in the stock preparation. For every product range, you will find some general information, a photo, a dimensional drawing, a picture of the spray and a table with the product performances. Please note that only a small part of the nozzles that PNR can manufacture and supply is on display.

To have a complete overview of our standard product range please visit our website www.pnr.eu or, if you have any special request, we invite you to write to info@pnr.it.

The main purpose of the twin-wire washer is to clean the stock pulp from contaminants, ashes and to increase the consistency. The dewatering fabrics need high pressure washing and lubrication showers.

The main purpose of a vibrating screen is to clean up the reject waste to recover fibers from the previous processing stage.

DESCRIPTION	SHOWERS	TOTAL DELIVERY (lpm)	OP. PRESSURE (bar)	WATER TYPE	PNR NOZZLES
Wire Washing	1	500	20	F / FCWW	GE
Wire Lubrication	1	500	3	CWW	GE
Vibrating Screen	1	50	3	F	K, J, HT
Tank Washing	1	---	3	F	UAC, UBA, UBC, UBT

DRY END

In this section, we present nozzles and air blowers for use during the dry end phase. For every range, you will find some general information, a photo, a dimensional drawing, a picture of the spray and a table with the product performances. Please note that only a small part of the nozzles that PNR can manufacture and supply is on display.

To have a complete overview of our standard product range please visit our website www.pnr.eu or, if you have any special request, we invite you to write to info@pnr.it.

ACCESSORIES & FITTINGS

In this section, we show accessories and assembly fittings for a quick and easy installation of our nozzles. The first is a self-cleaning pipe, with its related dimensional drawing and a table with all different possible construction variations. Then the mixing eductors and, finally, wash-guns and hose reels, with a single illustrative picture due to the extremely wide variety of models we can produce and offer. If you have any special request, or if you want to have a complete view of all our accessories and fittings, we suggest you to visit our web site www.pnr.eu or write to info@pnr.it

Self cleaning shower pipes are used in the pulp and paper industry for washing and cleaning forming fabrics and felt.

There are two kind of pipes:

1. Low pressure (2 ÷ 6 bar) fixed pipes with flat fan nozzles (PNR nozzle: GE).
2. High pressure (25 ÷ 70 bar) oscillating pipes with straight jet nozzles (PNR nozzle: GEA).

The table on the right shows the minimum and the maximum values for the pipes already produced. We are at your disposal for any request, please contact us at info@pnr.it.

Pulp and paper plants must maintain a high level of cleanliness at all times and strict standards in manufacturing are required to comply with quality control procedures. In addition to our wide range of tank washers for inside cleaning of tanks and vats, we offer a line of products specially designed for efficient cleaning and sanitizing operations in production facilities. This includes:

- professional cleanings guns, max working pressure 350 bar, max working temperature 160 °C
- flexible hoses, up to 50 m, max working pressure 8 bar, max working temperature 160 °C
- hose reels, max working pressure 200 bar, max hose length 70 m

Contact us at info@pnr.it or www.pnr.eu/prodotti/accessories-fittings/ for further information.

As many of the products shown in this catalogue are available in different materials, their identification code in this catalogue is not complete: an alfa-numerical string that must be added to the product code identifies the construction material. The following alfa-numerical strings identify the most used materials:

B1: AISI 303 SS	D6: PP + 30% fiberglass	F30: Ruby insert on AISI 303 SS body
B31: AISI 316L SS	D82: PVDF KYNAR	F31: Ruby insert on AISI 316L SS body
C2: AISI 416 SS hardened	E1: PTFE	T1: Brass
C7: AISI 316Ti SS	E31: POM DELRIN	V7: Aluminium, electroless nickel plated
D1: PVC		

FIRE FIGHTING

Fire suppression systems are necessary to protect high-risk areas in pulp and paper mills where a fire or an explosion can occur, such as, in storehouses where flammable and finished products are stocked, or even in small rooms where dangerous materials like paints and lubricants are kept at hand. The FLOWTECH Group, to which PNR Italia belongs, also includes SDM Antincendio, company specialized in systems for fire protection and suppression. The highly qualified and experienced Staff of SDM will be happy to listen to your requirements for what concerns fire protection and fire-fighting needs.

NEW NOZZLE FOR FIRE PROTECTION OF LARGE SURFACE AREAS

SDM is expanding the wide range of its products with a new nozzle, specially designed and tested for a high efficiency protection of large surface areas.

This nozzle was originally designed for fire-fighting systems installed in highway and road tunnels, however, its special performances make it highly suitable for the fire protection of large surface areas such as storerooms, shopping malls, supermarkets and the like.

This unique design nozzle (patent pending) produces a fine water spray with an impressive flow rate of 150 litres per minute and requires a feed-water supply pressure of 5 bar only.

Therefore, this new nozzle offers the following advantages:

- 1) Cost-effective installation. One single nozzle can cover a round surface of 7-metre diameter, hence, a surface area of 40 square meters.
- 2) In many cases, an efficient fire protection can be achieved with a reduced number of nozzles and a low investment pump.
- 3) Fine sprays do not flood or damage stocked materials that can often be completely recovered.
- 4) The water mist spray evaporates quickly can mitigate the effects of an explosion and is often extremely effective for fire suppression.

You may look at a video showing this new nozzle in action in the SDM website.

PNR ITALIA

Incorporated in 1968, PNR has always been active in the design and manufacture of spraying nozzles and systems for industrial applications. In all these years, PNR has made major investments both in machinery and human resources to develop top quality products and today is one of the most modern spray nozzles manufacturing facilities in the world. We manufacture thousands of different products and can offer our customers one of the most complete portfolios in the world, while staying focused on research and innovation. Our production machines and tools include latest generation CNC turning machines, many of them built to our requirements to accomplish special manufacturing processes. All products and their performance are strictly controlled throughout the whole production process, and our quality management system is certified to ISO 9001.

PRODUCT WARRANTY

PNR products will be replaced or repaired at the option of PNR and free of charges if found defective in manufacturing, labelling and packaging. The above conditions will apply if notice of defects is received by PNR within 30 days from date of product installations or one year from date of shipment. The cost of above said replacement or repair shall be the exclusive remedy for any breach of any warranty, and PNR shall not be held liable for any damage due to personal injuries or commercial losses coming from product malfunction. It is self-understood that no warranty may apply in case our products have been operated under nonacceptable conditions, like for example (but not limited to):

- Operation at pressures exceeding those shown in catalogue performance table
- Operation with or exposure to liquids containing abrasive particles
- Operation with or exposure to liquids producing a chemical attack on the nozzle material
- Mechanical damages to nozzle orifices, nozzle spray edge or body due to careless handling or assembling.

In all above cases, the customer must accept a nozzle life reduction below life expected, or performance parameters below the values in the catalogue. The guarantee may be exercised as follows:

- By sending a precautionary report to PNR on the detected damages. This report can also be sent by email to this address: quality@pnr.it
- If PNR ascertains that the manufacturing faults are actually subject to the warranty, the product shall have to be returned to the manufacturer in its original packaging prior request of authorization to the manufacturer and receipt of manufacturer's written authorization.
- The rejected goods shall have to be returned by the means that PNR will communicate to the customer and the transportation costs of returned merchandise will be entirely borne by the manufacturer.

DISCLAIMER

Our products are manufactured with the best care and according to the latest developments of the technology available. However we cannot assure that every one of our products is perfectly fit for every specific application. The information in this catalogue is provided "as seen" and so we offer no warranty of any kind with respect to the subject matter or accuracy of the information contained herein. This publication may include technical inaccuracies or typographical errors and changes may be periodically made to the information herein without prior notice.
