

CLUSTER NOZZLE / STANDARD SPRAY ANGLE

CAS cluster nozzles have seven orifices, large spray capacities and produce very fine droplets using hydraulic pressure only. As the droplets size, among other factors, also depends on the nozzle size, these multi-orifice nozzles produce a finer spray than a standard full cone single-orifice nozzle working at the same pressure and delivering the same quantity of liquid. The surely are the best choice when fine mist effect and large spray capacity are required.

Typical applications

Cooling

cooling of high-temperature gas

Fire control

watermist fire suppression systems

Other applications

exhaust gas treatment, dust control, wetting

Thread specification: BSP, NPT
